(101.6 × 58.1 × 35. [1] It is part of Sony's Cyber-shot RX digital camera line. It was named "European Advanced Compact Camera for 2012–2013" by the European Imaging and Sound Association (EISA)[2] and one of the "Best Inventions of 2012" by TIME. [3] Since then, Sony has introduced the new RX100 models almost one per year (see Sony RX100 series.) Notable features 1.in. type (13.2 × 8.8 mm) CMOS Expulsion sensor (culture factor 2.7x.) This uses the "Column-Parallel A/D Conversion Technique" to create more detailed images in low light conditions than smaller sensor cameras. [4] 10fps shooting capacity at resolution 20.2MP. M, A, S, P modes available Flash pop-up Tiltable, allowing flash bounce. Large maximum opening, F1.8-F4.9 Carl Zeiss Vario-Sonnar Lentle T* [5] Concentrate the available peak display, 3.6 × optical zoom. Carl Zeiss T* Vario-Sonnar (28–100 mm 35 mm equivalent focal length [10.4–37.1 mm effective focal length]) 3in. TFT LCD (fixed) with 1.29 million points, using RGBW RAW configurationpossible (by giving improved post-capture image editing options) FULL HD video shooting (AVCHD, 50fps) Two Sony Cyber-shot DSC-RX100s Cyber-shot DSC-RX100 II In June 2013, Sony presented a new version of the camera, called DSC-RX100 II (DSC-RX100M2). [6] New features included: 20.2 megapixel 1in. type Exmor R CMOS sensor, notable to be a backlit sensor Maximum expanded ISO mode at 12800 (about 40% more light sensitivity) tilting LCD (+84°/-45°) Multi Interface Shoe Wi-Fi mount connectivity NFC Full HD video shooting mode (1080/24p) RX I1100 On July 23, 2013, the Swedish luxury camera manufacturer Hasselblad announced the 'Stellar': a compact camera based on the DSC-RX100, incorporating a wooden or carbon socket. On November 1, 2013, Hasselblad announced three other cosmetic variants of the camera, called Stellar Special Edition. On November 26, 2014, Hasselblad announced the Stellar II based on the DSC-RX100M2. The mark-III version of the RX100, the Cyber-shot DSC-RX100 III (DSC-RX100M3), was released in June 2014. [7] The camera had a new Bionz X processor, as used in the Sony Alpha 77 II, and a new Zeiss Vario-Sonnar T* lens (24-70mm (35mm equivalent), f1.8-2.8) that gives a wider angle of view (while the maximum focal length equivalent from 100mm to 70mm). [8] Unlike its predecessor, the RX100 II, does not have Sony's multi-interface(limiting flash photography to the small built-in unit), but includes an OLED pop-up electronic viewfinder (EVF). [9] The DSC-RX100 III has customizable functions. The viewfinder and the back LCD can be set on different displays. The RX100 III can be manually set with the shutter speed and the fixed opening, but with Auto ISO (sensitivity) giving the correct measured exposure. [10] RX100 Mark III with attack. A DSC-RX100 III camera that shows the extended positions of the lens, flash, electronic viewfinder and LCD panel. In June 2015, Sony released the Cyber-shot DSC-RX100 IV, the mark-IV version of the RX-100.[11] Like its predecessors, it has the same 1-inch CMOS sensor as 20.2 megapixel and ISO 12800 levels. The RX-100 MARK-IV can now record 4K videos in XAVC-S format with frame rate up to 24, 25 and 30 fps. However, due to extreme writing speed and processing power, it can only record 5 minutes 4K shots to avoid serious damage to the camera. [12] It also features Slow-mo video recording and can capture up to 960 fps for NTSC mode and 1000 fps for PAL mode. [13] Cyber-shot DSC-RX100 V On October 6, 2016, Sony announced the RX100 V.[14] In this update, Sony has improved camera performance by supporting the world's fastest autofocus, the world's most popular auto focus points, and the world's fastest continuous shooting for a compact camera with fixed lens. [15] Sony's faster autofocus speed statement is that the camera can lock on fire in less than .05 seconds.increased the number of focus points taken at 315 hits, and also improved continuous shooting performance allowing up to 150 continuous shots to take full 20.1 megapixel at 24 frames per second. [15] This has been updated with improvements like an increased buffer and processor after the release of RX100 VI [16] Cyber-shot DSC-RX100 VI On June 5, 2018, Sony announced the RX100 VI.[17][18] In this iteration, Sony introduced a new ZEISS Vario-Sonnar T* 24-200mm F2.8 – F4.5 zoom lens. In addition, Sony has again improved autofocus performance, improving autofocus speed at .03 seconds. [19] Other performance improvements in continuous shooting and 4K motion videos have also been made. Cyber-shot DSC-RX100 VII On July 25, 2019, Sony announced the RX100 VII.[20][21] New features include unlimited video duration (previously 30 min) and a 3.5 mm TRS stereo mini jack to connect an external microphone (previously none).
